

OPEN SOURCE

My AI agent became a whole team.

One prompt. A real launch page, shipped.

18

PERSONAS

Seven crafts. One leader.

Each one a Markdown file your agent summons by name.

- **Engineering**

Software Developer ·
Software Architect ·
Software Tester

- **Product**

Product Manager ·
Product Brainstormer

- **Design**

Product Designer ·
Content Designer ·
Graphic Designer

- **Distribution & Growth**

Social Media Manager · Influencer

- **Infrastructure & Security**

Cloud Architect ·
DevOps Engineer ·
Security Engineer

- **Data & Research**

Data Scientist · Researcher

- **Writing & Learning**

Content Writer · Educator

- **Team Leader**

ORCHESTRATOR

Direction, sequencing, the final cut, the one that runs the other seventeen.

This is **everything** I typed.

Point Claude Code, Cursor, or any agent at the agent-persona-kit folder. Then hand the team leader the whole job:

● ● ● claude code

```
> Team leader: build & ship my launch  
page: hero, three features, a  
get-started CTA.
```

THEN I LET THE TEAM RUN IT ↓

One job in. Six specialists on it.

● **Team Leader**

breaks the job down • picks the crew • loops the review

PULLS THE SIX THIS JOB NEEDS • OF 18 ↓

- **Product Manager**
 - **Product Designer**
 - **Software Developer**
- **Content Writer**
 - **Graphic Designer**
 - **Security Engineer**

↔ THEY CONSULT AS THEY GO ↔

REVIEWED UNTIL CLEAN ↓

REAL OUTPUT • NOT A MOCKUP

That one prompt shipped the product.

SCOPED • WRITTEN • DESIGNED • CODED • SECURITY-CHECKED

● ● ● agent-persona-kit

Agent Persona Kit

RosterA persona fileOrchestration

Fork it on GitHub

MIT-LICENSED • 18 PERSONAS • ONE MARKDOWN FILE EACH

A good agent isn't one prompt. It's a team you can summon by name.

A free, MIT-licensed starter set of 18 personas — one Markdown file each — seventeen specialists that consult each other, and a team leader who runs the whole job.

Fork it on GitHub

\$ git clone https://github.com/srivardhanjalan/agent-persona-kit | copy & drop it into your agent

MIT-licensed. Eighteen personas, one Markdown file each — clone and start assigning work.

WHY IT WORKS

Durable context, loaded on demand

Each persona is the opinionated kernel of a craft — nothing project-specific baked in. You're not re-explaining your bar every session.

It caught its own bugs.

 **Security Engineer** Self-contained. No leaked links or secrets.
CLEAN PASS

 **Content Writer** Two roster lines cut short vs the README;
CAUGHT → FIXED one persona relationship written
backwards.

 **Designers** The code panel clipped long lines mid-
CAUGHT → FIXED word. Now it wraps.

EVERY FINDING REAL • EVERY ONE FIXED

Fork it. Train it. Make it yours.

18 bare-bones personas. You direct; they run. After every job, fold what each one learned back into its file. That's the training.
